

Drawing Amendments

The attached sheets of drawings includes changes to Figures 7 and 8, as described below, as well as corrections required by the USPTO draftsman. These sheets replace the original sheets.

In Figure 7, the reference number identifying the nut is mistakenly labeled 27. A corrected drawing is attached which correctly labels the nut with reference number 31. This reference number is supported in the specification on page 5, line 10.

Figure 8 has been amended to show the ball within the retaining member, and to indicate the location of the void (reference number 25) between the truncated surface of the ball and the interior of the retaining member. No new matter has been added since the relationship of the ball within the retaining member and housing, including void 25, is described in the specification on page 6, lines 1-14.
